JOB TITLE: SENIOR ELECTRICAL ENGINEER

LOCATION: Albuquerque, New Mexico

PHONE CALLS NOT ACCEPTED.

For detailed job requirements and to apply, please visit our website at www.whpacific.com

Candidate's experience should include a broad range of electrical designs for new buildings and facility renovations. Background should include government, commercial, education, healthcare, hospitality, and water/wastewater facilities. Project experience should include medium and low voltage power distribution, controls and instrumentation, emergency power, grounding, lightning protection, security, lighting analysis and design, fire alarm, and communications systems design as well as knowledge of applicable codes. Duties include performing calculations, preparing drawings and specifications, writing reports, assigning and managing work performed by others, quality control reviews, marketing, business development, and maintaining successful client relationships. Has a good understanding of Building Commissioning (BC) process activities as they relate to electrical and special systems. Successful candidate will also be able to lead an electrical design team on individual project and will be called upon to lead larger multidiscipline teams as project manager. As project manager, candidate will interface with clients, oversee quality review process, manage budgets, deliverables, and schedules and create reports. NM Professional Engineer Registration, NCEES desirable; minimum of 15 years experience in Electrical Engineering with Project Management skills.
